DONOMA

Stay on top of your game with just one touch.

The convenience of voicemail with the flexibility of email.

9 out of 10 phone calls go to voicemail. Yet busy professionals can't afford to let messages wait—nor do they have time to keep calling the office to check for new messages.

Unify for Notes seamlessly delivers your voicemail messages to you right away via your phone, PC, smartphone or web-browser.

Touch that message once and Unify takes care of the rest. Automatically, immediately, conveniently. No more message clutter and confusion. Just great responsiveness that keeps you in touch no matter where you are.

Key Features for busy professionals:

- Voicemail messages delivered to your Lotus Notes/iNotes inbox, and Lotus Sametime viewer.

- Dynamic updates of message status to all your voicemail access systems.

- Supports voicemail message archiving compliance. (Required in regulated industries)

- Convenient phone dial/redial controls in each message.

- Intuitive to use. No training required.

- Easy to save & file voicemail messages.

- Share voicemail with anyone via email. Even include additional documents.

- Review messages on your device of choice: PC, smartphone, web browser, or even redirect a message to your office phone hand-set or IP Communicator client. (Great for sensitive messages)

- Support for iPhone, Blackberry and Android

- Customizable organizational privacy statements.

DONOMA UNIFY
For NOTES

Key Features for IT:

- **Virtually touch free once installed.** Managed support provides proactive application monitoring, patch/update installation and administration of user moves, adds and changes.

- Supports voicemail archiving via your existing email archiving product or our Donoma Message Vault solution.

- Supports Domino Servers running on Windows, LINUX or AS/400 platforms.

- Scales up to 10,000 users per server, 100,000 users overall.

- Password independent synchronization. No passwords are collected or require updates.

- Optimized for installation in a virtualized environment. Single VM & High Availability.

- Import new users via spreadsheet.

- Filter message downloads to the user account before or after a certain date. (Great for users on extended leave.)

- De-activated account flagging identifies accounts that are no longer active where voice-messages are arriving.

- Enhanced message tracking for support & troubleshooting
